

Satellite radio is here to stay. We really like it, especially when we are away from our local area. Having clear uninterrupted radio signal is wonderful on long trips. It is not fair to have the monied conglomerates try to dictate what we can and cannot receive via our XM Radio. These airwaves belong to US. Please do not let the NAB influence you to take away OUR right to receive all kinds of information. There are precious few alternatives these days since there have been so many mergers. They should be required by the free market to get their acts in order if they want to compete, and not have our own Government telling us what we can receive and not receive.
